🚀 Step-by-Step Deployment Guide for Bryan

📥 STEP 0: Download the Project

You should see TWO files above this document:

1. **"Insights Portal"** (folder)
2. **"Insights Portal.tar"** (compressed file)

Download EITHER ONE - they contain the same files.

🎯 STEP 1: Extract and Setup (10 minutes)

1.1 Extract the Files

If you downloaded the folder:

- Just open it, you're ready!

If you downloaded the .tar.gz file:

- Right-click → Extract All (Windows)
- Or double-click (Mac)
- Extract to: `C:\Projects\Insights_Portal` (or anywhere you like)

1.2 Copy Your .env File

```
FROM: C:\Users\bryan\My Files\AI\_secrets\PowerBI-Copilot\.env
TO:   C:\Projects\Insights_Portal\.env
```

Windows Command:

```cmd
copy "C:\Users\bryan\My Files\AI\_secrets\PowerBI-Copilot\.env" "C:\Projects\Insights_Portal\.env"
```

Verify it worked:

- Open `C:\Projects\Insights_Portal\.env`
- You should see your Google Drive credentials, Supabase URL, etc.

🎯 STEP 2: Install Node.js (if not installed)

2.1 Check if Node.js is Installed

Open Command Prompt or PowerShell:

```
cmd

node --version
```

If you see: `v18.x.x` or higher → You're good! Skip to Step 3.

If you see: "not recognized" → Install Node.js:

2.2 Install Node.js

1. Go to: https://nodejs.org/
2. Download the **LTS version** (left button)
3. Run the installer
4. Click "Next" through all steps
5. Restart Command Prompt
6. Verify: `node --version`

🎯 STEP 3: Install Backend Dependencies (5 minutes)

3.1 Open Command Prompt

Windows:

- Press `Windows + R`
- Type: `cmd`
- Press Enter

3.2 Navigate to Backend Folder

```
cmd

cd C:\Projects\Insights_Portal\backend
```

(Replace path if you extracted elsewhere)

3.3 Install Dependencies

```
cmd

npm install
```

Wait 2-3 minutes. You'll see lots of packages being installed.

When done, you should see:

```
added XXX packages
```

🎯 STEP 4: Install Frontend Dependencies (5 minutes)

4.1 Navigate to Frontend Folder

```cmd
cd C:\Projects\Insights_Portal\frontend
```

4.2 Install Dependencies

```cmd
npm install
```

Wait 2-3 minutes.

🎯 STEP 5: Start Backend Server (2 minutes)

5.1 Open First Command Prompt

Keep your current Command Prompt open, navigate to backend:

```cmd
cd C:\Projects\Insights_Portal\backend
npm run dev
```

You should see:

```
✨ Server running on port 3001
🌍 Environment: development
✅ Supabase initialized
✅ Google Drive initialized
✅ MCP Server initialized
```

LEAVE THIS WINDOW OPEN - the server is running!

🎯 STEP 6: Start Frontend Server (2 minutes)

6.1 Open SECOND Command Prompt

Open a NEW Command Prompt window:

Windows:

- Press `Windows + R`
- Type: `cmd`
- Press Enter

6.2 Start Frontend

```
cmd

cd C:\Projects\Insights_Portal\frontend
npm start
```

Wait 10-20 seconds.

Browser should automatically open: `http://localhost:3000`

You should see: Aiko login page with professional blue design!

🎯 STEP 7: Test Locally (10 minutes)

7.1 Create Account

1. Click "Sign up"
2. Enter:
    - Full Name: Bryan Panopio
    - Email: bryan@test.com
    - Password: Test123456!
3. Click "Create Account"

Should redirect to login automatically

7.2 Sign In

1. Enter:
    - Email: bryan@test.com
    - Password: Test123456!
2. Click "Sign In"

You should see: 3-pane interface!

7.3 Check Reports List (Left Pane)

Expected:

- Should show "PowerBI_Reports" or categories
- Click to expand
- Should see "Superstore 2025.pbix"

If you DON'T see reports: → We need to do Google Drive authentication (next step)

7.4 Select a Report

1. Click "Superstore 2025.pbix"
2. Center pane should show report header
3. Right pane should show chat interface

7.5 Test Chat

1. In right pane chat box, type: "What is this report about?"
2. Press Enter or click Send
3. Aiko should respond!

✅ **If all this works, you're ready to deploy!**

🎯 STEP 8: Google Drive Authentication (5 minutes)

This is ONE-TIME ONLY

8.1 Get Auth URL

In browser, visit:

```
http://localhost:3001/api/auth/google/url
```

You'll see JSON like:

```json
{
  "authUrl": "https://accounts.google.com/o/oauth2/v2/auth?..."
}
```

8.2 Copy and Visit the URL

1. Copy the ENTIRE `authUrl` value
2. Paste it in a new browser tab
3. Press Enter

8.3 Authorize Google

1. Sign in with your Google account (the one with PowerBI_Reports folder)
2. Click "Allow" to grant access
3. You'll be redirected back

You should see: "google_auth=success" in the URL

Done! Token is saved. You won't need to do this again.

8.4 Verify Reports Load

1. Go back to: `http://localhost:3000`
2. Refresh the page
3. Click on reports in left pane
4. Should now see your PBIX files!

🎯 STEP 9: Push to GitHub (5 minutes)

9.1 Open Git Bash or Command Prompt

Navigate to project:

```cmd
cd C:\Projects\Insights_Portal
```

9.2 Initialize Git (if needed)

```cmd
git init
git remote add origin https://github.com/agentbryanpanopio/Insights_Portal.git
```

9.3 Add All Files

```cmd
```

```
git add .
```

9.4 Commit

```
cmd

git commit -m "Initial commit: Aiko Insights Portal complete"
```

9.5 Push to GitHub

```
cmd

git push -u origin main
```

If prompted for credentials:

- Username: agentbryanpanopio
- Password: Use a GitHub Personal Access Token (not your password)

To create token:

1. Go to: https://github.com/settings/tokens
2. Generate new token (classic)
3. Select "repo" scope
4. Copy and use as password

🎯 STEP 10: Deploy to Vercel (30 minutes)

10.1 Create Vercel Account

1. Go to: https://vercel.com/
2. Click "Sign Up"
3. Click "Continue with GitHub"
4. Authorize Vercel

Done! You're logged in.

10.2 Import Project

1. Click "Add New..." → "Project"
2. You should see "Insights_Portal" in the list
3. Click "Import"

10.3 Configure Build Settings

Root Directory:

- Click "Edit"
- Select: `frontend`

Framework Preset:

- Should auto-detect: "Vite"

Build Command:

- Should auto-fill: `npm run build`

Output Directory:

- Should auto-fill: `build`

Install Command:

- Should auto-fill: `npm install`

10.4 Add Environment Variables

CRITICAL STEP!

Click "Environment Variables"

Add EACH of these from your .env file:

```
GOOGLE_DRIVE_CLIENT_ID = [paste value from .env]
GOOGLE_DRIVE_CLIENT_SECRET = [paste value from .env]
GOOGLE_DRIVE_POWERBI_FOLDER_ID = 1SDHWPU9Cx4IG65JUSOVoKymnfc703OYs
GOOGLE_DRIVE_DOCUMENTATION_FOLDER_ID = 15pR3eEm2TzIL-6OPKcO6bZ5CTI029nMz
GOOGLE_DRIVE_SKILLS_FOLDER_ID = 10216GUujQO6O3NYDV6nchhC0kFNjMrkH
GOOGLE_DRIVE_SCRIPTS_FOLDER_ID = 1DMZcQ5YaoedETQ6Dhg64SerT-uS2yPR8
GOOGLE_DRIVE_TEMP_FOLDER_ID = 1Y2KXbbk4-j8d56FNgjD5pCa4AcHX4w4y
GOOGLE_DRIVE_REDIRECT_URI = https://aiko.datadictum.com/auth/google/callback
SUPABASE_URL = [paste from .env]
SUPABASE_ANON_KEY = [paste from .env]
SUPABASE_DB_PASSWORD = [paste from .env]
ANTHROPIC_API_KEY = [paste from .env]
ANTHROPIC_MODEL = claude-sonnet-4-20250514
ANTHROPIC_MAX_TOKENS = 4096
NODE_ENV = production
PORT = 3001
FRONTEND_URL = https://aiko.datadictum.com
API_BASE_URL = https://aiko.datadictum.com/api
SESSION_SECRET = [paste from .env or generate new random string]
JWT_SECRET = [paste from .env or generate new random string]
CORS_ORIGINS = https://aiko.datadictum.com
```

For each variable:

1. Enter the key (name)
2. Enter the value
3. Click "Add"

10.5 Deploy!

1. Click "Deploy"
2. Wait 3-5 minutes
3. Watch the build logs

When successful:

- You'll see "🎉 Congratulations!"
- You get a URL like: `insights-portal-xyz.vercel.app`

10.6 Test Vercel URL

1. Click "Visit" button
2. Should see Aiko login page
3. Try to sign in

4. Test basic functionality

If it works → Proceed to custom domain!

🎯 STEP 11: Add Custom Domain (15 minutes)

11.1 In Vercel Dashboard

1. Go to your project
2. Click "Settings"
3. Click "Domains"
4. Enter: `aiko.datadictum.com`
5. Click "Add"

Vercel will show:

```
Add the following record to your DNS:
Type: CNAME
Name: aiko
Value: cname.vercel-dns.com
```

11.2 In Hostinger

1. Log in to: https://www.hostinger.com/
2. Go to "Domains"
3. Click "Manage" next to datadictum.com
4. Find "DNS / Name Servers" or "DNS Zone"
5. Click "Add Record" or "Manage DNS"

Add new record:

- Type: `CNAME`
- Name: `aiko`
- Value: `cname.vercel-dns.com`
- TTL: `3600` (or leave default)

6. Click "Save" or "Add Record"

11.3 Wait for DNS Propagation

Time: 5-30 minutes (usually 10 minutes)

Check status in Vercel:

- Go back to Vercel → Domains
- Should say "Valid Configuration" when ready

Test it:

```
https://aiko.datadictum.com
```

When it works:

- ✅ Shows Aiko login page
- ✅ Green padlock (SSL) 🔒
- ✅ Can sign in
- ✅ Can select reports
- ✅ Can chat with Aiko

🎯 STEP 12: Update Google OAuth Redirect (5 minutes)

Important: Update your Google Cloud Console

1. Go to: https://console.cloud.google.com/
2. Select your project: "PowerBI-Copilot"
3. Go to: APIs & Services → Credentials
4. Click your OAuth 2.0 Client ID
5. Under "Authorized redirect URIs", add:

```
https://aiko.datadictum.com/auth/google/callback
```

6. Click "Save"

✅ DONE! Your Site is Live!

Visit: **https://aiko.datadictum.com**

You should be able to:

- ✅ Sign up / Sign in
- ✅ See your reports from Google Drive

- ✅ Select a report
- ✅ Chat with Aiko about the report
- ✅ View chat history

🆘 Troubleshooting

Backend won't start

Error: "Cannot find module" **Fix:** Run `npm install` in backend folder again

Frontend won't start

Error: "Port 3000 already in use" **Fix:** `npx kill-port 3000` then try again

Reports don't load

Fix: Complete Google Drive authentication (Step 8)

Vercel deploy fails

Fix: Check all environment variables are added correctly

Custom domain doesn't work

Fix: Wait 30 minutes, check CNAME record is correct

📞 Need Help?

Come back to this chat and tell me:

1. Which step you're on
2. What error you see
3. Screenshot if possible

I'll help you fix it! 🚀

🎉 **Good luck! You're about 2 hours away from having your live site!**
